I enjoy my XM radio and use the traffic and weather channel on a daily basis in my business commute. When I need traffic reports, I cannot wait for the regular radio stations to get around to it, while they play ads and music and other news. By then, I am in the middle of a traffic jam. Satellite radio gives me instant, up to the minute reports, which I find invaluable in my business and daily life. I respectfully urge you to reject NAB's petition 04-160, and to allow XM radio to compete in the American way! Thank you.
